

# Artistry Online: Digital Gallery Website

My website will be a digital gallery designed to showcase artwork from a range of artists, time periods, and mediums. Users will be able to view paintings, sculptures, and digital works while learning about the artists who created them. The site will serve as both a virtual gallery and a personal collection space where registered users can save their favorite works. The goal of the website is to make art more accessible to a global audience while providing a platform where people can discover, appreciate, and engage with artwork from their own computers. The website will use a backend system to store and edit data such as artwork details, artist profiles, user accounts, and event information. This will ensure the site has both aesthetic appeal and functionality.

## Pages:

- Home/About
- Gallery (artwork with details)
- My Collection
- Artists (biographies)
- Featured Exhibitions

## Data Storage:

- Artwork Data: title, artists, year, style, medium, description
- Artist Profiles: name, bio, photo, portfolio links
- User Account: username, password
